

What objects do you need to make to complete this project?

Translate Shapes

Across Four Quadrants

Name _____

How can you draw the shapes using coordinates?

What do you need to make the program do to **report** the x and y coordinates?

What do you need to **do to** your x or y coordinate to translate them to a different position?

If you change just the x coordinate which **direction** does the shape translate to

If you change just the y coordinate which **direction** does the shape translate to
