

program start

wait seconds

do forever

if then

else

end if

if then

else

end if

loop

motor 1 FORWARD at 50 %

Other useful code blocks

motor 2 REVERSE at 50 %

You can put a condition in here such as if button pressed down

A is HI

or if button not pressed

A is LO

If the condition **is** met then code in here would be run

If the condition is **not** met then code in here would be run

This conditional selection block is like the one above.

Can you work out how it can make the other wheel go forwards or backwards when the button is pressed or not pressed
